📙 Functional Requirements Document (FRD)

Project: Client Churn & Brokerage Revenue Dashboard

---

1. System Overview

The system will use historical client, trading, and engagement data to generate insights through a Power BI dashboard.

---

2. Data Sources

- Client Data (Client_ID, Age, Account Type)
- Trade Data (Trade Date, Segment, Brokerage)
- Portfolio Data
- Engagement Data (Logins, RM Calls)

---

3. Data Processing

F1: Data Integration

- Merge datasets using Client_ID
- Ensure one-to-many relationships

F2: Derived Metrics

System should calculate:

- Total Clients
- Total Revenue
- Days Since Last Trade
- Churn Status
- Churn Score
- Risk Level

F3: Churn Logic

- Active → ≤30 days
- At Risk → 30–60 days

- Churned → >60 days

F4: Risk Scoring

System should assign a churn score based on:

- Inactivity
- Engagement level
- Revenue contribution

---

4. Dashboard Functionalities

D1: KPI Display

- Total Clients
- Total Revenue
- Churn Rate
- Revenue at Risk

D2: Visualizations

- Pie Chart → Churn Distribution
- Line Chart → Revenue Trend
- Bar Chart → Revenue by Segment
- Scatter Plot → Engagement vs Revenue

D3: Client-Level Insights

Table should display:

- Client_ID
- Revenue
- Risk Level
- Days Since Last Trade

D4: Filters & Interactivity

- Segment filter
- Account Type filter
- Date filter

5. Non-Functional Requirements

- Performance: Dashboard loads within 5 seconds
- Usability: Easy navigation and clear visuals
- Scalability: Can handle increasing data volume

6. Output

- Interactive Power BI Dashboard
- Insight-driven reporting
