

Business Requirements Document (BRD)

Project: Client Churn & Brokerage Revenue Analysis

1. Introduction

1.1 Purpose

The purpose of this document is to define the business requirements for identifying client churn and analyzing brokerage revenue in a stock broking firm.

1.2 Background

The organization is experiencing:

- Declining active client base
- Increased client churn
- Fluctuating brokerage revenue

This project aims to provide a data-driven solution to monitor and reduce churn.

2. Business Objectives

- Identify clients at risk of churn
 - Analyze client trading and engagement behavior
 - Measure revenue contribution by client segments
 - Enable proactive decision-making for retention
-

3. Stakeholders

- Business Head
 - Sales & Relationship Managers (RM)
 - Product Team
 - Data/Analytics Team
-

4. Scope

In Scope:

- Client churn identification
- Revenue analysis
- Dashboard development
- Client segmentation

Out of Scope:

- Real-time system integration
 - Automated communication systems
-

5. Business Requirements

BR1: Churn Identification

System should classify clients based on inactivity:

- Active
 - At Risk
 - Churned
-

BR2: Client Behavior Analysis

System should analyze:

- Trade frequency
 - Trade value
 - Engagement metrics
-

BR3: Revenue Analysis

System should provide:

- Total brokerage revenue
 - Revenue by segment
 - Revenue per client
-

BR4: Risk Segmentation

Clients should be categorized into:

- High Risk
 - Medium Risk
 - Low Risk
-

BR5: Reporting & Dashboard

Interactive dashboard should provide:

- KPI summary
 - Churn distribution
 - Revenue insights
 - High-risk client identification
-

6. Success Metrics

- Reduction in churn rate
 - Increase in active clients
 - Improvement in revenue retention
-

7. Assumptions

- Data provided is accurate and complete
 - Churn is defined as no activity in 60 days
-

8. Constraints

- Limited historical data
 - No real-time data pipeline
-
